# 1. Document Information

## 1.1 Current Release Document Control & Authorisation

	Name	Signature	Date
Prepared by:	Emilio La Greca	<i>Emilio</i>	04/02/25
Modified by:			
Checked by:	Emilio La Greca	<i>Emilio</i>	04/02/25
Approved by:	Ramin Mousavi	<i>Ramin</i>	04/02/25

## 1.2 Change History

Issue	Date	Change Details	Change by	Approved by
1.0	04/02/25	First release.	<i>Emilio</i>	<i>Ramin</i>

## 2. References

The following documents and standards listed in Table 2a have been used as references in the preparation of this Product Requirements Specification.

Document Name	Document No.	Issue Number Used

**TABLE 2a: Documents referred to within this document**

## 3. Definitions

Abbreviation	Description
USB	Universal Serial Bus
API	Application Programmers Interface
SWD	Serial Wire Debug
UART	Universal Asynchronous Receiver-Transmitter
I <sup>2</sup> C	Inter-Integrated Circuit
RS232	Recommended Standard 232
RS485	Recommended Standard 485
TI	Texas Instruments

## 4. Purpose

The purpose of this document is to broadly detail the requirements of the N-CW7 Networker Controller that includes embedded Wi-Fi as an option.

## 5. Requirements

The existing Rinnai N-C7 Touchscreen controller platform is to be upgraded to include embedded Wi-Fi as an option. This is a 3-tier project that encompasses the following distinct areas:

- Hardware modification of existing hardware platform.
- Firmware modification of existing firmware.
- Software modification of test / debug Windows based software.

The scope of this requirement specification is the **hardware modification** of the existing hardware platform illustrated below:

**Existing N-C7 Hardware Platform**

#### Requirements summary:

- The hardware upgrade is to allow for a Wi-Fi module to be integrated based on the TI CC3200 family, starting with the current in-use CC3200MODR1M2AMOBT device which is used in the Rinnai N-BW2 Touch Wi-Fi Module:

**Existing N-BW2 Wi-Fi Module**

- The CC3200 module is to be provided on a solderable PCB interfaced via castellated pads so this module can be easily replaced with minor modification to the N-CW7 baseboard allowing for future Wi-Fi based modules (future proofing).
- USB access to the CC3200 module is to be provided to program and monitor its operation with direct connection access to the STM32 microcontroller currently used in the touchscreen controller.
- Remove unused hardware peripherals on the touchscreen controller:
  - Audio output.
  - SD card reader.
  - External RTC.
- Upgrade all components to Innotechs standard 3D-Bodies.
- Strictly follow the Wi-Fi module track routing and placement guidelines stipulated by TI.

Schematic / PCB files in Altium format will be provided for both products.
